OUTPUT:

"SAVE WATER SAVE EARTH"

Water is one of the most essential resources required for our survival.

Uses of Water:

1. Drinking
2. Cooking
3. Bathing
4. Industrial purposes
5. Farming
6. Hydrogen fuels etc.

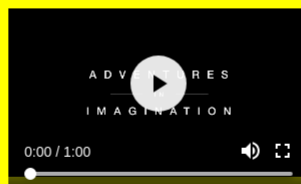

Due to excess use as well as wastage of this important resource we are in the danger of facing a shortage of clean drinking water. Thus it is of utmost importance to make effort to save this natural resource before it gets completely exhausted.

1. Do not leave taps running after use
2. Farmers should be encouraged to adopt methods like rainwater harvesting
3. Industries should stop dumping chemical and other types of wastes in lakes and rivers
4. Spread awareness through social media

Here is a clip of a group of farmers in Madhya Pradesh implementing the rainwater harvesting method:

Also listen to an interview by [Tom Hudson](#) who has been running a campaign for this cause:
